THE FRUIT

Oblate, symmetric shape, with depressed apex, not so marked surface ridge, and medium deep pedicel cavity; creamy-white skin, over-coloured in fading bright red with a moiré effect on 90-100% of its surface. White flesh, the anthocyanin pigmentation is not present or not so relevant, intense near the stone, medium, slightly fibrous texture with high consistency. Sweet taste. Clingstone variety, medium-sized stone, stone is never cracked.

POSITIVE FEATURES

- size;
- colour;
- very intense sweet taste

WEAK POINTS

- It mainly grows on big branches
